Novel Biologic Drug Research and Development Highlights (two novel biologic drug discoveries from bench to US FDA new drug and biologics clinical trials)

Musculoskeletal Novel Biologics - NELL from discovery to approval for clinical trial

1. First to discover the function of Nell-1 in bone regeneration (please see Section in Patents)
2. Winner of the 2018 International Space Station Innovation Award – Biology and Medicine for Development of NELL-1 Bone-Growth Systemic Therapy. Our team was invited by the Whitehouse-National Space Council (NSpC) to attend a special round table session in Washington, DC at the White House Eisenhower Executive Office Building on Monday, October 29, 2018. The goal of the meeting is to get bright minds together in one room to

establish a dialogue, bridge gaps, and leave the NSpC with some actionable perspective that they can use to formulate a national microgravity research policy

3. Founder of Bone Biologics <http://bonebiologics.com/investor-relations/news-releases/>. Bone Biologics Corp. (OTCQB:BBLG), a developer of orthobiologic products for domestic and international spine fusion markets, today has announced that it received Human Research Ethics Committee (HREC) approval on March 20, 2019, for the first center of a multicenter pilot clinical trial to evaluate NB1 (NELL-1/DBX®) in 30 patients in Australia. The pilot study will evaluate the safety and effectiveness of NB1 in adult subjects with degenerative disc disease (DDD) at one level from L2-S1, who may also have up to Grade 1 spondylolisthesis or Grade 1 retrolisthesis at the involved level who undergo transforaminal lumbar interbody fusion (TLIF).
4. One of our papers "High Doses of Bone Morphogenetic Protein 2 Induce Structurally Abnormal Bone and Inflammation In Vivo" is one of the most cited papers in Tissue Engineering. It provides the one of the first evidence of the adverse effect of BMP2, the most used biologics in orthopedics for bone regeneration. Skin Regenerative Novel Peptide drug– FMOD novel peptide drug to reduce wound scarring from discovery to US FDA Phase II new drug trial

First team to discover the novel FMOD peptide function in scar reduction and skin regeneration (Please see Section in Patents). Founder of Scarless Laboratories to bring this invention to FDA clinical trials.

<https://cnsi.ucla.edu/blog/2018/10/25/october-25-2018-scarless-laboratories-receives-fda-clearance-to-initiate-phase-iiia-trial-of-sli-f06-peptide-for-scar-reduction/>
FMOD peptide R&D was conducted for over 18 years. In 2018, IND was cleared by the FDA for Phase 1/2A clinical trials and we have successfully completed Phase 1 & 2A trial. Development of this drug was largely inspired by the patients we see in craniofacial clinic that oftentimes undergo multiple surgeries with suboptimal outcomes due to scarring. If successful, this is one of the first biologic peptide drugs invented at UCLA.
